

For me, one of the most challenging experiences at times was that when I started, I didn't have much homework at school, so I took advantage of it to complete the whole scenario. The advantage was that I did it ahead of time, and as a result, I had a good outcome regarding the project. My thinking was that while I was working on these designs, my team would support me by creating some of the animations. So, I first handed over my models for them to work on without any problems, but they encountered difficulties when making the animations. I wanted to help a little, but since the semester was already quite advanced, it was becoming burdensome to explain how to do them because I had already taken the course once and had the knowledge to carry out the project.

In the end, I had to do the entire organization because I had asked for some progress in the work, but I never received any files to add to the project. So, I had to prepare myself and organize everything on my own to finish it, reviewing past practices again. It became complicated because we didn't have some laboratory practices, so I had to do research on my own, but in the end, we succeeded.

I acquired a lot of knowledge due to this experience, and in part, it wasn't so bad to finish alone. I learned to use GitHub, Blender, 3ds Max, GIMP, among others, mostly self-taught. I have a moderate knowledge in the subject now, and I would like to continue learning about it in the diploma program.

As the professor mentioned, things are very different in the working world, and here we can get an idea of how the decisions of some people can affect several of us. But if something is already set, it has to be fulfilled one way or another, whether it's searching for models and texturing them or obtaining them from more complex designs, and a good analysis to implement them. It wasn't all bad; I learned a lot and learned how to work with a team and without one.

The responsibility of the project, and the fact that it's my second enrollment, forced me to push myself harder to get things done, which led me to organize myself since it's a bit challenging for me. But with this project, I acquired new ways of organization that will work for me in the future.
